If you watch birds solely for your own enjoyment, a written description of your observations is unnecessary. But, for research projects like the Atlas, a written description for unusual species is essential. The final atlas project must have a solid basis, and for unusual records, we require written documentation. By providing the verifying written description you are employing a basic rule of the scientific method. The Atlas Technical Committee will review the report and approve it for inclusion in the Atlas database.

This form will perpetuate your record for examination by others in the future. The Atlas requires this of every extraordinary observation, irrespective of the observer.

Describe Habitat
with California Gulls at noted Gull Colony on Island in Adobe Creek (Blue Lake) Res.

Atlas Breeding Code Overall behavior. Did it interact with any other birds? Describe.

T ← The one I saw White breaking camp, several Gulls hunted just offshore, and the Lesser Black-backed immediately jumped to my mind as a possibility. Because of its longer, more pointed wings, lack of white spots at the wingtips, and noticeably darker mantle. It landed to roost, and a few minutes later, it flew by. This time, I saw the bright yellow eye, longer yellow bill with red on the lower mandible, and bright yellow legs. It was an adult, about the size of the California, but looked larger in flight because of the longer wings.

Describe all field marks observed: size, color, pattern, shape, bill, etc. Describe any unique features this bird had.

For the sake of the atlas, it flew to and landed on the island, where Gulls are well known to occasional nest with other gull species. To me, it is likely to nest with a California Gull on the island. I used to come out there & know the Biology of the gulls there well.

What song or sounds did it make?

N/A

Field marks not seen. Why not?

N/A

Variation from expected field marks

N/A

List similar species. Why and how did you eliminate them?

California is the most similar to LBBG of all expected Gull species in NA in size, leg color (yellow-green in CASU), but other differences are noted above

What is your experience with this or similar birds?

This is my 4th adult Lesser Black-backed Gull in Colorado. I found a winter adult on the Denver from XMAS count that was re-found by dozens during a 3 month stay there.
